August 2022

Translated directly from the original email in Afrikaans:

After 43 years of service as Head of Environmental Health at the district municipality in Welkom (in Free State), I retired. The last 3 – 4 years we experienced massive water disruptions, and it is still happening today. I started doing serious research around water softening products on the market as our borehole water generally had a very high concentration of Calcium & Magnesium. I evaluated many of the products on the market and decided to purchase a PTH as it met my standards.

The product needs no maintenance or chemical refills which was one of the many benefits that appealed to me. Because of my career background I understand the biochemical functioning of the product.

I purchased a PTH water conditioner for our household in 2021 and am very satisfied with the product. We soon realised that soap in the shower, bath, dishwasher and washing machine foamed up again as it did before. We do not experience problems with limescale build-up in the kettle anymore and I am sure that this is also the case with the geyser.

Our daughter and her family visited us from Cape Town this past winter, and my son-in-law was very impressed with how delicious our water is now.

I can explain many other advantages of using this product. Anybody is welcome to contact me at 082 922 0734 or WhatsApp regarding the PTH Water Conditioner or to visit me personally in Henneman.

Regards

Pieter le Roux
