TRANSLATION FROM AFRIKAANS: REINS NATURE RESERVE TESTIMONIAL

To whom it may concern

In February 1998, Reins Nature Reserve bought a 1¼' Israeli PTH Water conditioner from the sole distributors PTH Water Improvement CC in Cape Town to treat the extraordinary hard and brack water in the reserve. The PTH was installed on the main water supply line.

The results were astonishing. The PTH device, which requires no chemicals, benefited Reins Nature Reserve in several ways, namely:

- 1. Lime scale layers on the irrigation system were broken up within days and the nozzles are once again clean and as good as new.**
- 2. Sensitive crops are grown under this system and no negative effects are observed.**
- 3. The environmentally friendly PTH, even improved the TASTE of the water.**

Hardness precipitates in the form of scale deposits on kettle and geyser elements as soon as it is heated, and even in this respect the PTH gives peace of mind.

We can recommend the PTH with confidence to any user wanting to protect his implements and at the same time wishing to improve his water and soil quality.

Signed

Nico Malan
