TESTIMONIAL REGARDING THE USE OF THE ISRAELI PTH WATER CONDITIONER ON COOLING TOWERS AND BALTIMOR AIR CONDITIONING SYSTEMS

I am the Maintenance Manager of Sanlam Properties in the Fourways Mall in Midrand, Johannesburg and the complex's water treatment systems, including the cooling towers and air conditioning systems are my responsibility.

We were for some time without success looking for a suitable system to combat scale deposits and similar forms of fouling in the Sanlam Properties building complex, until, in October 1997, we applied the Israeli PTH device at one of the cooling towers. The results were amazing: whereas all the other cooling towers were fouled up, the system serviced by the PTH was kept clean and lime free, and there was no deposit - without chemicals! Because the PTH works so well for us, we now plan to protect all Sanlam's cooling towers with the PTH device. The PTH saves the user thousands of Rands annually on unnecessary expenses wasted on chemicals, while the cooling towers's operational cycle is infinitely extended, and there are no losses as a result as result of downtime and in-productivity .

The device is easily installed on the water supply line. The PTH does not use chemicals or electricity and is practically maintenance free.

I am at liberty to recommend the PTH system for cooling tower driven air conditioning systems.

Yours faithfully

CP Boer

Maintenance Manager
